

Business Question and Visualization Report

Date	26 August 2026
Team ID	-
Project Name	Food Ordering Behaviour and Consumer Trends
Maximum Marks	5 Marks

Visualization development refers to the process of creating graphical representations of data to facilitate understanding, analysis, and decision-making. The goal is to transform complex datasets into visual formats that are easy to interpret, enabling users to gain insights and make informed decisions. Visualization development involves selecting appropriate visual elements, designing layouts, and using interactive features to enhance the user experience. This process is commonly associated with data visualization tools and platforms, and it plays a crucial role in business intelligence, analytics, and reporting.

Business Questions and Visualisation

The process involves defining specific business questions to guide the creation of meaningful and actionable visualizations in Tableau. Well-framed questions help in identifying key metrics, selecting relevant data, and building visualisation that provide insights.

1. Which cuisines receive the highest number of customer orders?

- **Visualization:** Horizontal bar chart showing the total number of customer orders for each cuisine.
- **Screenshot of Visualization:**

2. How do food orders vary across different age groups and restaurant types?

- **Visualization:** Stacked bar chart showing the distribution of food orders across different age groups and restaurant types.
- **Screenshot of Visualization:**

3. Which restaurant types receive the highest number of customer orders?

- **Visualization:** Bar chart comparing the total number of customer orders across different restaurant types.
- **Screenshot of Visualization:**

4. How do company types influence meal type orders?

- **Visualization:** Bar chart showing the distribution of meal type orders across different company types.
- **Screenshot of Visualization:**

5. How are customer ratings distributed across different meal types?

- **Visualization:** Donut chart showing the distribution of customer ratings across different meal types.
- **Screenshot of Visualization:**

6. Which cities have the highest food order volume?

- **Visualization:** Bar chart showing the top five cities based on the total number of food orders.
- **Screenshot of Visualization:**

7. What is the distribution of repeat orders for the selected cuisine?

- **Visualization:** Bar chart showing the distribution of repeat and non-repeat orders for the selected cuisine.
- **Screenshot of Visualization:**

8. Which restaurant types have the highest average order value?

- **Visualization:** Horizontal bar chart comparing the average order value across different restaurant types.
- **Screenshot of Visualization:**
